

Preset counter electronic

Position display with analogue output

Position- and Difference Preset Counter Type 572

Innovative:

- 2 separate freely scalable count inputs - HTL or TTL; Both also with inverted inputs, max. input frequency 1 MHz/ channel
- Very bright LED display 15 mm high (6 digit) and 10 mm high (8 digit)
- 4 freely programmable fast solid-state outputs, each with 350 mA output current
- Step or tracking preset
- Simple programming – with function codes, dependent on the operating mode selected
- With 8 different permanent count functions, such as simple count, difference count and total count of both inputs, batch counters etc.

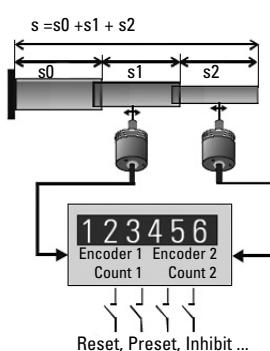

Compact:

- Up to 3 display values in a single device, Display Counter 1, Display Counter 2 as well as the display calculated from Counter 1 and 2
- AC and DC supply voltages in one device
- Simple programming with 4 keys, all keys can be assigned dual programming functions.

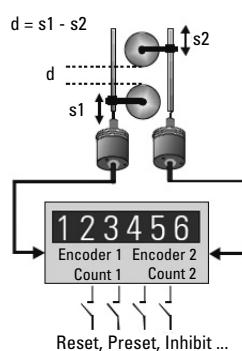

Versatile:

- Can be used as a counter or position display with limit values
- Monitoring function, where 2 values are monitored or calculated with respect to each other
- 4 fast programmable inputs with various functions such as reset, gate, display memory , reference input or switching between the display values.
- Scalable analogue output 0/4 ... 20 mA, +/-10 V or 0 ... 10 V
- 2 auxiliary power supplies for sensors: 5.2 V DC and 24 V DC
- Standard interface RS 232
 - for parameter setting
 - for reading out the values to a PC or PLC
 - for modifications during operation

Application examples:

Total-Position display

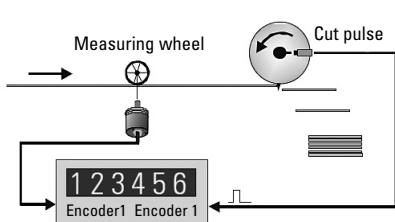

Difference-Position display

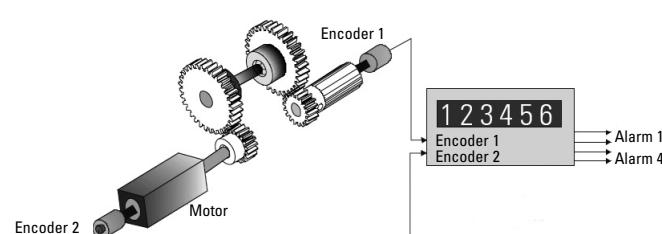

Counter series for demanding applications, with two individually scalable encoder inputs, in each case A, \bar{A} , B, \bar{B} for count frequencies up to 1 MHz per channel. Operating modes can be selected for position or event counter, total counter, difference counter, cut-to-length display, diameter calculator and more.
